BACKGROUND

On July 31, 2008, Hydrogen Energy California, LLC (HECA) submitted an Application for Certification (08-AFC-8) to the California Energy Commission. A Revised AFC was submitted to reflect a change of the project site to an alternative location. In 2011, Hydrogen

Energy California LLC, was acquired by SCS Energy California, LLC. On May 2, 2012, SCS Energy, LLC, submitted an Amended Application for Certification (08-AFC-8A) reflecting several changes to the original project design. The new Amended Application for Certification (AFC) has been assigned a new, distinguishing docket number, 08-AFC-8A.

PROJECT DESCRIPTION

The applicant intends to construct and operate an Integrated Gasification Combined Cycle (IGCC) power generating facility called Hydrogen Energy California (HECA). The proposed HECA project would gasify blends of 75 percent western coal and 25 percent petroleum coke from California refineries to produce hydrogen to fuel a combustion turbine operating in combined-cycle mode. The amended project incorporates a proposed manufacturing complex that would produce urea in both liquid and pellet form, and other byproducts for agricultural and manufacturing uses. The combined-cycle power block would generate approximately 405 MW of gross power and would provide a nominal 300-megawatts of electricity to the grid. The gasification block would also capture approximately 90 percent of the carbon from the raw syngas (the direct end of the gasification process) at steady-state operation, which will be transported to a custody transfer point at Elk Hills Oil Field for CO₂ enhanced oil recovery (EOR) and sequestration. The Energy Commission staff has begun its discovery and analysis of the HECA project, and will use information obtained from the workshop discussions in the preparation of its Preliminary Staff Assessment of the project.
